

# RABBIT SCRAM PROFESSIONAL™

## APPLICATION INSTRUCTIONS

**RABBIT SCRAM PROFESSIONAL™** repels rabbits before they begin to nibble on plants. The all natural ingredients creates the sense and smell of dead kin to rabbits that approach an application. It is applied as a perimeter treatment around areas affected by rabbit damage. Calculate the correct amount to apply by measuring linear feet around affected beds and damaged areas.

### ASSESS AND QUOTE:

- Examine damage and threatened areas.
- Measure perimeters of the vegetation needing protection and calculate total linear feet of application.
- 25 lb. container provides protection of approx. 1,180 linear of protective strips (protecting approximately up to a maximum of 19,000 square feet based on 22" strips).

**APPLY:** Apply a 24 inch barrier strip around vulnerable plants, damaged and threatened areas, beginning right at the edge of beds, plants or pots. Broadcast lightly within the first 2 or 3 feet of affected gardens or beds. Re-apply every 30 days. Water and moisture help activate Rabbit Scram Pro and keep it fresh and effective.

**ALL SEASON USE:** Rabbits are active all year long. Protect spring green growth with early application and reapply during summer. Specific winter applications are available for heavy snowfall regions. Extremely heavy rain may require re-application.

**Do not contaminate water, food or feed by storage or disposal. Do not apply directly to water.**
