STOPS PEST DAMAGE

professionalrepellents.com

**SKUNK SCRAM
PROFESSIONAL**

- Stops lawn damage & prevents return to treated area. Prevents returning skunk intrusion under & around buildings & structures
- All Natural formula that contains no chemicals & works on their senses of taste and smell to deter them from treated areas
- Eco-friendly ~ Won't harm skunks, people or pets
- Fast Acting & won't wash off in normal rainfall

Skunk Scram™ Professional is our new addition to the Scram family of Repellents. It is designed specifically to stop and then prevent damage caused by skunks. It is both highly effective and long lasting.

Skunk activity increases primarily in the spring and are nocturnal. Skunks are a nuisance especially in urban & suburban areas, as they produce a powerfully pungent spray, can damage lawns extensively, and dig in garden beds while searching for food.

HOW WE CAN HELP

Skunk Scram Professional is a proprietary blend of all natural ingredients that repels skunks and alters their environment in two ways:

- Food tastes bad and their digestive system is disturbed.
- Tunnels & surrounding soil become bad-smelling.

**DEER SCRAM
PROFESSIONAL**

- Trains Deer to stay away from protected areas
- All Season Use ~ Ideal in Winter, won't wash off in rain
- Won't harm animals, people or pets
- Environmentally Safe - ideal around organic gardens

Deer Scram Professional is made up of animal by-products such as meat meal, blood meal & other natural ingredients. It imitates the smell of dead deer, which stimulates a sense of fear and a strong avoidance reaction.

For Quoting Deer Application: Measure perimeters of the landscaped areas that need to be protected. Calculate total on linear methods by measuring for a 20" band outside the protected area.

To Apply: Use the scoop provided in the bucket, sprinkle liberally starting 15 inches from the edge of the landscaped area making a 20" wide band around the perimeter of the area.

All Season Use: Each application of Deer Scram Professional should last 30 days, including normal rainfall or irrigation. Extremely heavy rain may require re-application. Winter damage to shrubs can be prevented by applying on top of snow and hanging small sacks on target vegetation. Specific winter applications are available for heavy snowfall regions.

NOTE: WE RECOMMEND THIS PRODUCT BEST BE APPLIED WITH SCOOP PROVIDED.

Skunk Scram Professional

ITEM# **6022**
22 lb. (9.98 kg)
COVERAGE: Approx. 13,000 square feet

ITEM# **6008**

10 lb. (4.53 kg)
COVERAGE: Approx. 600 linear ft.
Sold in 4 per case

- All Season Ready to Use
- Ideal for golf courses, playing fields, large lawns
- Drives them out of application zones
- Environmentally Safe - ideal around organic gardens
- Won't harm animals, people or pets

Mole Scram Professional's all natural ingredients allow it to leach into the ground to coat worms & bugs, the moles' main food source, with a bad taste. It also makes the mole's tunnels and surrounding soil smell disagreeable to them. These changes to moles' environment drive them out of the application zone.

For Quoting Mole Applications: Measure an area that extends 30 feet beyond the infested area to obtain total square feet. Apply by using a broadcast spreader. Brand specific settings are included in Applications Instructions within each bucket.

Day 1 Application: In a radius extending past the infested area at least 30 feet, apply Mole Scram Pro to this entire area, Use 2 applications, 14 days apart. Water In! Mole Scram Professional should be watered in for 20 minutes after each application.

Day 14 Application: Reapply Mole Scram Pro two weeks after initial treatment. Reapply every 30 days thereafter.

All Season Use: Moles are most visibly active during wet seasons, when worm activity near the surface is greatest. Use preventative applications in early fall and early spring, and in mid-winter in southern regions.

Mole Scram Professional

ITEM# 5225

22 lb. (9.98 kg)

COVERAGE: Approx. 15,000 sq. feet

WORKS ON COOTS TOO!

- Naturally Repels ~ designed to reduce & eliminate activity
- Environmentally Safe
- Ideal for Open Landing Areas, Golf Courses and Airports
- Safe Near Ponds, Lakes, Rivers, Nesting Locations
- Won't harm birds, people or pets
- All Season Ready to Use

Goose Scram Professional was developed to address:

- Overgrazing
- Fouling of reservoirs & swimming areas
- The accumulation of droppings and feathers in public areas
- Preventing aggressive attacks during nesting season or by aggressive birds around food. Continued re-application will TRAIN the geese (and coots) to find other areas to frequent, graze in and nest; and deters their return to the application area.

General Application Instructions: On all uses. Apply first application at a rate of 1 lb per 350 square feet.

See application instructions enclosed in bucket or on website.

Apply where geese or coots are grazing and feeding!

For best control, re-apply In 14 Days. Monitor the area and reapply when evidence of geese encroaching through the treated area is noticed. Application should last 25 days.

Goose Scram Professional

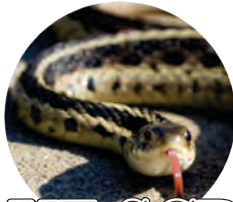

ITEM# 5922

22 lb. (9.98 kg)

COVERAGE: Approx. 7,700 sq. feet

All Natural Granular Repellent Products that STOP Pests in their Tracks

Snake Scram Professional

- Works on ALL TYPES of snakes!
- Ideal for golf courses, playing fields, use for both commercial & residential properties
- Won't harm reptiles, people or pets
- Environmentally Safe

Snake Scram Professional is effective in deterring and repelling most snakes, including many poisonous species such as rattlesnakes & copperheads where their venom can be deadly. Our natural granular formula contains no chemicals, and does not wash away quickly.

To Apply: Using the scoop provided, apply to entire area where snakes have been observed or are known to inhabit. Apply beyond the area by 6 feet. Snake Scram Pro should repel snakes immediately. Repeat in 14 days, and every 30 days after. Reapply after heavy rains.

Likely places to find snakes around homes include:

- Firewood stacked directly on the ground
- Old lumber or junk piles
- Gardens and flower beds with heavy mulch
- Untrimmed shrubs and shrubs growing next to a foundation
- Un-mowed & unkept lawns, abandoned lots and fields with tall vegetation
- Pond & stream banks with abundant natural debris
- Cluttered basements & attics with rodent, bird or bat problem
- Feed storage areas in barn hay lofts where rodents abound, and
- Crawl spaces under buildings.

Peak Application: Early spring and throughout summer months where activity has been observed in the past. Apply throughout inhabited area at first sign of snake presence. Either extreme rainfall or drought may increase snake activity. Apply around structures or exclusion areas before snake presence is detected.

NOTE: WE RECOMMEND THIS PRODUCT BEST BE APPLIED WITH SCOOP PROVIDED.

Rabbit Scram Professional

- Trains rabbits to stay away from gardens & plants
- Granular repellent quickly establishes a band of protection
- All Season Use ~ Ideal in winter, won't wash off in rain
- Won't harm animals, people or pets
- Environmentally Safe - ideal around organic gardens

Rabbit Scram Professional gives the sense and smell of dead kin to rabbits that approach an application. It is applied as a perimeter treatment around areas affected by rabbit damage. Calculate the correct amount to apply by measuring linear feet around affected beds and damaged areas.

To Apply: Using the scoop provided in bucket, apply a 24" barrier strip around vulnerable plants or threatened areas, beginning right at the edge of beds, plants or pots. Broadcast lightly within the first 2 or 3 feet of affected gardens or beds. Reapply every 30 days. Water and moisture help activate Rabbit Scram Pro and keep it fresh and effective.

All Season Use: Rabbits are active all year long. Protect spring green growth with early application and reapply during summer. Specific winter applications are available for heavy snowfall regions. Visit our website for recommendations for winter. Extremely heavy rain may require re-application.

Rabbit Scram Professional

Sold in 4 per case

SPREADER SETTING Enviro Protection Industries Company, Inc.'s recommended spreader settings can be found on each product label or on application enclosed in bucket. These may need to be adjusted based on application process in order to provide easy flow.

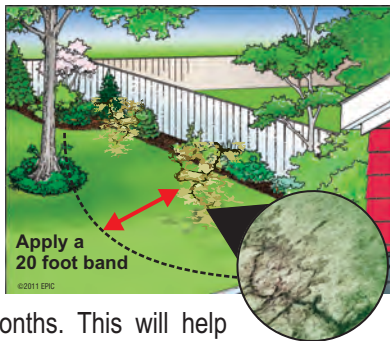

VOLE SCRAM™ PROFESSIONAL

- Reduce & Eliminate Voles (field mice) from lawn, turf and infested beds.
- Works by taste & smell, fast acting
- Won't harm animals, people or pets
- Environmentally Safe - ideal around organic gardens
- Long lasting, up to 30 days

Vole Scram Professional is an organic, granular repellent used to reduce and eliminate voles (field mice) from lawn, turf and infested beds. Vole Scram Pro will safely and naturally stop vole infestation when used as directed.

Apply Vole Scram with a broadcast spreader or apply by hand with scoop in beds, mulch or rough grass. Voles are predominately active under snow covering during winter months. Apply a 20 foot band to the perimeter of the property where voles are nesting during the summer months. This will help reduce voles from entering the property.

For Northern Snowfall Regions: **First Application** (Late October After Irrigation Is Off) Apply to areas that have repeated winter vole infestation each year. **Second Application** (November 14 Days After first application) Re-apply to the same areas prior to snowfall (Voles problems seem to be heaviest in areas where snow drifting occurs). **Third Application** (Early Spring to Late Winter) Apply immediately after snow melt.

For Midwest & Southern Regions: **Apply 2 applications**, 2 weeks apart, to areas that are showing vole damage. Repeat again 30 days after 2nd application.

Vole Scram Professional

ITEM# 5822

22 lb. (9.98 kg)

COVERAGE: Approx. 13,200 sq. feet

WILD HOG SCRAM™ PROFESSIONAL

FOR RESIDENTIAL APPLICATIONS

- Reduce & eliminate wild hog activity in residential areas
- All Season Ready to Use
- Won't harm animals or environment
- Repels up to 30 days after initial application
- Won't wash off with rain

Until recently, feral hogs' range was restricted to the southern states. Today, as many as 5 million feral pigs roam the USA mainly due to an abundance of food, no natural predators, and they are able to adapt & reproduce quickly. **Wild Hog Scram Professional** is specifically designed to reduce and eliminate wild hog activity in residential areas by altering their environment in two ways: Food tastes bad and causes their digestive system to be disrupted and makes surrounding soil bad-smelling.

Application Instructions: Apply using a rotary spreader. Apply at a rate of one pound per 600 square feet. Cover the area where wild hog damage has been observed and/or is occurring. Extend the coverage to about thirty (30) feet around and beyond the damaged area. For lawn and garden areas of 5,000 or less square feet, we recommend covering the entire area. Hand sprinkle within damaged garden plots and beds. Locate entry trails if possible. Apply in a band across the trail where it enters an area to be protected. Also, apply on the trail for 30 feet back from the entrance using a 4-foot wide band. Reapply in 14 days after the initial application and then every 30 days or as needed.

All Season Use: Each application of Wild Hog Scram Professional should last 30 days, including normal rainfall or irrigation. Extremely heavy rain may require re-application.

Wild Hog Professional

ITEM# 5422

22 lb. (9.98 kg)

COVERAGE: Approx. 12,100 sq. feet

GOPHER SCRAM
PROFESSIONAL

- Works by offensive taste & smell to pocket gophers
- Stops plant & lawn damage
- Environmentally Safe - ideal around organic gardens
- Won't harm animals, people or pets
- All Season Use ~ Lasts up to 30 days

Gopher Scram Professional alters pocket gophers' environment by making their food source disagreeable to taste and making surrounding soil smell bad.

To Quote: Estimate dimensions of the affected area, add 30 feet to the dimensions, and calculate square feet to be covered.

2-Step Application: STEP 1 DAY 1. Using a broadcast spreader, cover entire area where gopher damage is present. Application should extend 30 ft. around or beyond the infested area (indicated by mounds & plant damage). **STEP 2.** Locate mounds, sprinkle about 3 oz. (1/8 of a scoop or a small handful) into each mound. Open plugged mounds to access & apply Gopher Scram Professional. Refill opened mounds with soil. **WATER** the application area for approximately 20 minutes.

DAY 14 Application: Apply Gopher Scram Professional by repeating Day One steps. Repeat every 30 days thereafter. Pocket gophers are active throughout the year and do not hibernate. **Peak times** for mound building activity begin in spring and continue through fall.

CAT REPELLENT
PROFESSIONAL

FOR OUTDOOR USE ONLY

- Professional grade high performance product works in any season regardless of temperature or climate
- Easy to use - just apply: no spraying or mixing
- Granular formula doesn't wash off
- Won't harm animals, people or pets

Cat Repellent Professional™ provides strong repelling power without harming pets, people or the environment. This product was specially formulated **and tested** to naturally train cats to avoid treated areas and is both easily applied and long lasting. Use in landscaping, gardens and outdoor potted plants to keep cats (both domestic and feral) away.

To Apply: Apply Professional Cat Repellent using the scoop provided in the bucket. Cover areas where cats repeatedly use for defecation. Apply 2 times, 14 days apart to the same area. Then re-apply 30 days later. We **strongly suggest** to dig out or rake out any previous cat droppings before application. Can also apply in outside potted plants without fear of or hurting the plants. **Not For Use Inside Homes or Buildings.**

All Season Use: Pet cats, both owners & others in the neighborhood, often create outdoor litter box areas in flower beds, shrubs and planting areas making gardens bad smelling and unsanitary for children and other pets. Feral cats, born from strays, frequently establish lounging and litter box areas within suburban and other settled areas.

ARMADILLO SCRAM PROFESSIONAL

- Stops lawn damage & burrowing
- Environmentally Safe - ideal around organic gardens
- Repels & alters their environment by taste & smell
- Use year round, ideal for infested areas
- Won't harm animals, people or pets

Armadillo Scram Professional repels armadillos and stops digging damage in two ways: Food tastes bad, and surrounding soil and armadillo burrows become bad smelling.

To Apply: DAY 1: Apply with spreader. Cover the entire area where armadillo damage has occurred and up to boundaries where armadillos have entered. Extend the coverage to about thirty (30) feet around and beyond the damaged area within large properties.

Hand sprinkle, using the scoop provided, within damaged garden plots and beds. Look behind shrubs and along buildings for excavated nesting areas and apply liberally within them. If burrow entrances can be located, drop a half scoop into each hole and flush down thoroughly with water.

DAY 14: Reapply Armadillo Scram in 14 days after the initial application. Reapply every thirty days thereafter. Heavy or extended

Armadillo Scram Professional

ITEM# 5725

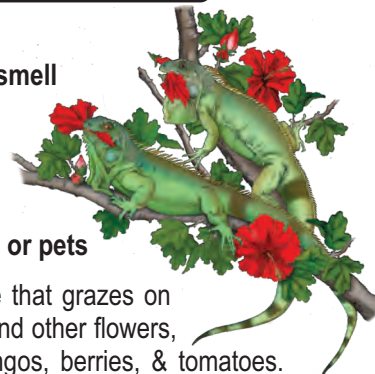

22 lb. (9.98 kg)

COVERAGE: Approx. 13,200 sq. feet.

IGUANA SCRAM PROFESSIONAL

- Works by offensive taste & smell to green iguanas
- Stop plant & lawn damage
- Works in all seasons
- Environmentally Safe
- Won't harm animals, people or pets

The green iguana is a herbivore that grazes on young vegetal shoots, hibiscus and other flowers, shrubs, trees, orchids, figs, mangos, berries, & tomatoes. Their feces is found in or around water (a backyard swimming pool is perfect). They breed and lay eggs often in great numbers. Their nest-burrowing digs up yards, undermines sidewalks, sea walls, and building foundations.

The Florida Keys area where the endangered Miami Blue is struggling to re-colonize, the green iguana is bad news as they are threatening to drive the butterfly into extinction. Although the iguanas are too well established in Florida to be eradicated, Iguana Scram Professional can help control and exclude them on a local scale.

Photo courtesy of UF/IFAS Extension

GENERAL APPLICATION: Flower beds, shrubs, gardens: Sprinkle or spread to form a border approx. 15-18 inches out from the edge of the bed with a 20-24 inch band of Iguana Scram. Apply using the scoop provided so it is visibly heavy enough to see. Sprinkle around tree bases to keep iguana's from climbing tree to get to vegetation.

For Excessive problems in high iguana density areas: Initial Application: Apply as above and add a second band 15 inches out from the first strip around the bed and broadcast Iguana Scram Pro lightly throughout the inside of the bed. This will stop the problem and only a single band nearest the bed will be needed for maintenance applications going forward.

Iguana Scram Professional

ITEM# 5910

8 lb. (2.378 kg)

COVERAGE: Approx. 2,400 sq. feet.
