

# GOPHER SCRAM PROFESSIONAL™

## APPLICATION INSTRUCTIONS

**GOPHER SCRAM PROFESSIONAL™** alters pocket gophers' environment by making their food source disagreeable to taste and making surrounding soil smell bad. It is the only commercial repellent specifically designed to stop and prevent gopher damage. Pocket gophers are active throughout the year and do not hibernate. Peak times for mound building activity begin in spring and continue through fall.

**ASSESS AND QUOTE:** Estimate dimensions of the affected area, **add 30 feet** to the dimensions, and calculate square feet to be covered. Best applied by using a broadcast spreader. See setting below.

### 2-STEP APPLICATION:

**DAY 1, STEP 1.** Using spreader, cover entire area where gopher damage is present. Application should extend 30 ft. around or beyond the infested area (indicated by mounds & plant damage). **STEP 2.** Locate mound, sprinkle about 3 oz. (1/8 of a scoop or a small handful) into mound. Open plugged mounds to access & apply Gopher Scram Pro. Refill opened mounds with soil.

**WATER:** the affected area where Gopher Scram Professional has been sprinkled or spread for approximately 20 minutes.

**DAY 14:** Apply Gopher Scram Professional by repeating Day One steps.

**REPEAT:** Every 30 days thereafter.

**Do not contaminate water, food or feed by storage or disposal. Do not apply directly to water.**
