Voles are predominately active under snow covering during winter months. Early September - early October, apply a 20 foot band to the perimeter of the property where voles are nesting during the summer months. This will help reduce voles from entering the property.

### FOR NORTHERN SNOWFALL REGIONS:

**1ST APPLICATION** Late October After Irrigation Is Off. Apply to areas that have repeated winter vole infestation each year.

**2ND APPLICATION** November, 14 Days After first application. Re-apply to the same areas prior to snowfall (Voies problems seem to be heaviest in areas where snow drifting occurs)

**3RD APPLICATION** Early Spring to Late Winter. Apply immediately after snow melt.

### FOR MIDWEST & SOUTHERN REGIONS:

**APPLY 2 applications, 2 weeks apart, to areas that are showing vole damage.** Repeat again 30 days after 2nd application.
